

Service Operations – Table-Heavy Specification

This document presents service operations using structured tables including entities, relationships, workflows, decision matrices, and business rules. It is designed to test table extraction and reasoning.

Table 1: Entities

Entity	Description	Attributes
Customer	User requesting service	ID, Name, Contact
Order	Request for items/services	OrderID, Date, Status
ServiceAgent	Handles customer requests	AgentID, Role
Ticket	Issue tracking unit	TicketID, Priority
Resolution	Outcome of ticket	Type, Time

Table 2: Relationships

Source	Relation	Target	Condition
Customer	places	Order	When purchase initiated
Order	creates	Ticket	If issue occurs
ServiceAgent	handles	Ticket	Based on assignment
Ticket	results in	Resolution	After processing

Table 3: Workflow Steps

Step	Action	Actor	Output
1	Receive request	Customer	Order created
2	Validate request	System	Validated order
3	Assign ticket	System	Ticket assigned
4	Process issue	ServiceAgent	Resolution prepared
5	Close ticket	System	Ticket closed

Table 4: Decision Matrix

Condition	Priority	Action	Outcome
Minor issue	Low	Queue	Delayed resolution
Major issue	High	Immediate handling	Fast resolution
Critical failure	Urgent	Escalate	Executive review
No response	Medium	Send reminder	Await response

Table 5: Business Rules

Rule ID	Rule Description	Applies To	Exception
R1	All tickets must be logged	System	None
R2	High priority tickets handled within 2 hours	ServiceAgent	If system downtime
R3	Customers notified on status change	System	Notification failure
R4	Escalation required for critical issues	Manager	If resolved earlier

Table 6: Scenario Mapping

Scenario	Trigger	Process Path	Final Outcome
Delayed response	No agent assigned	Step 2 → 3 → 4	Escalation
System failure	Critical error	Step 3 → Decision → Escalate	Executive action
Normal flow	Valid request	Step 1 → 5	Resolution complete
